AHI APP Development Project Objectives Lifecycle Analysis					
Project Objectives	A: Level of agreement	B: Technology complexity	Project Score (A x B)	Decision	Comments
App development	3	4	12	Scrum	Product owner/Dev Team lead
App security upgrades	2	4	8	Scrum	Product owner/Dev Team lead
IT security upgrades	2	2.5	5	Predictive	Product Manager Lead
App training	2	2	4	Predictive	Product Manager Lead
IT storage upgrades	2	2	4	Predictive	Product Manager Lead
IT hardware and software installation	2	1	2	Predictive	Product Manager Lead
IT personnel acquisition	1	1	1	Predictive	Product Manager Lead

Note 1: Agreement scoring normally is an indicator of how much you can anticipate. The less agreement you have, the more change can be anticipated.

Note 2: Agreement scores and complexity can impact the delivery cycles. In most cases, low agreement and high complexity levels normally lead to the need to deliver more frequently to ensure you are meeting objectives.

Agreement Scoring Criteria	Almost 100%	About 80%	About 50%	Some Agreement 30%	Almost No Agreement
Level of agreement	1	2	3	4	5

Certainty scoring criteria	Known technology	Known technology: A few challenges	May require some explanation and prototyping	A few knowns: Many unknowns	Almost 100% new or unknown technology
Technology/Innovation	1	2	3	4	5
